Airway Dysfunction  
Craniofacial Development  
Dental Alignment

Look for the 'M' shaped box

*The Myobrace® System, by Myofunctional Research Co. (MRC), is a highly developed Myofunctional Orthodontic System which combines habit correction, arch expansion and dental alignment into one integrated system. It satisfies the demand from parents for a less invasive way to straighten teeth without braces, while also allowing children to develop to their genetic potential.*

It is not always possible to achieve all treatment goals. Treatment success is heavily dependent on the patient's compliance to Myobrace® treatment, their biological ability to change habits as well as growth patterns. Starting treatment early increases the chance of an optimum result.
